

MFM Consumer Behaviour

Assignment 2

**Aleena, Dhea, Mahathi,
Ananya, Kalyani, Karthik**

Group behaviours

**What's
happening**

**Peer networks & campus communities
strongly influence orders :**

MEDIA BRIEF

Swiggy runs targeted campus programs (e.g., “Campus Streaks” / Student Rewards) and group-ordering features that create social ordering loops among students. This leverages group norms and the desire to belong.

Marketing implications

Service 01

Group-driven ordering increases frequency and viral acquisition (peer influence reduces acquisition cost).

Service 02

Expand campus ambassador programs, add group bundles/discounts that require 3+ participants, and surface “friends ordered this” social cues in the app.

Personality Segmentation

Swiggy uses behavioural data to approximate personality-like user segments and then personalizes the homepage, recommendations, and push notifications. Identifies personality-like segments based on:

- Discount-seeking
- Fast-delivery preference
- Exploratory browsing
- These behaviours form personas to cater specific features to

This aligns with CB personality segmentation, where consumers are grouped based on stable behavioural traits rather than demographics.

Marketing Implications

Each personality-based segment responds differently to different marketing triggers. Understanding this allows Swiggy to optimise their marketing accordingly.

Promotions & Messaging

- Value-seeker → responds strongly to discounts, bundle offers, and wallet cashbacks.
- Convenience/time-sensitive → influenced by quick delivery, priority orders, and ETA accuracy.
- Exploratory foodie → influenced by novelty, social proof, “trending now,”

Notification Strategy

Different personalities need different nudges:

- Discounts vs speed reminders vs discovery-based content
- This avoids generic notifications, improving CTR and reducing notification fatigue.

Home & Recommendation Layout

Personalities influence how users process information, so the homepage must adapt:

- Value-seekers → see offers first
- Convenience-first → see fastest restaurants and reorder section
- Explorers → see “new near you,” trending picks, reviews

Conversion Funnel Optimization

The pathway from browsing → adding to cart → checkout differs by personality. If misaligned (e.g., showing premium restaurants to a discount-seeker), conversion drops

Recommended Solutions

Persona-Specific Funnels

Design 3 optimized user flows:

A. Value Persona (Value-Seeker)

B. Convenience Persona (Time-Sensitive / Efficiency-Oriented)

C. Exploratory Persona (Curious Foodie)

A/B Testing

Test variations in:

- CTA language (e.g., "Save ₹120 now" vs "Fastest delivery")
- Offers vs discovery banners
- Notification tone and frequency
- Restaurant ranking on the feed

Run experiments separately for each personality group to see which stimuli drive the highest conversion.

Algorithm Improvements

Machine-Learning-Driven Personality Clustering

Strengthen segmentation by using:

- Recency-Frequency-Monetary (RFM) patterns
- Browsing depth
- Sensitivity to price changes
- Time spent comparing menus

This allows Swiggy to update personality traits dynamically. Building feedback loops gives users control. This makes the algorithm more accurate and increases perceived personalization.

Recommended Solutions

Specific

user flows:

Value-Seeker)

B. Convenience Persona (Time-Sensitive / Efficiency-Oriented)

C. Exploratory Persona (Curious Foodie)

This allows Swiggy to update personality traits dynamically. Building feedback loops gives users control. This makes the algorithm more accurate and increases perceived personalization.

Primary Consumer Motivations

**Convenient &
Time Saving**

**Price Deals &
Offers**

**Variety,
Novelty &
Exploration**

10–15-minute delivery
→ **instant gratification**

Motivation Implies

why, when, and how
often a user orders

Matching
communication →
higher conversion

Strong
motivations →
greater retention

“route to purchase”

Motivation
predicts order
frequency

Solutions

Convenience Focused

- Highlight “Fastest options near you” at the top of feed.
- “Quick meals under 20 min” sections

Price-Sensitive Solutions

- Happy-hour discounts (low-demand hours) for specific user segments.
- Show “You saved ₹_ this month” to enhance reward motivation

Novelty & Variety Solutions

- Celebrity collabs to launch limited-time menus.
- Curate “Trending this week” or “New in your area” sections.

How Swiggy Shapes Consumer Attitude & Behaviour

**Case
Evidence**

**Recommended
Solutions**

**Market
Implications**

Case Evidence

Service 01

Swiggy builds positive brand attitude through smooth UX, reliable delivery, and personalized nudges (reorder, recommendations).

Service 02

Swiggy One loyalty drives trust, habit formation, and retention via free delivery + discounts.

Service 03

Youth-focused marketing (memes, campus ambassadors, events) creates a fun, student-friendly perception.

Service 04

But sudden fee hikes / surge charges without clear explanation can cause negative attitude shifts.

Market Implications

Service 01

Positive attitude → lower price sensitivity, higher retention even with small fee hikes

Service 02

Negative/neutral attitude → churn, especially in price-sensitive student groups.

Service 03

Attitude drives habit-based decision making, making users default to Swiggy without comparing with Zomato

Service 04

Perception of fairness becomes critical—unfair prices trigger emotional backlash

Recommended Solutions

Service 01

Use empathy-led communication for fee or price changes; explain benefits clearly.

Service 02

Expand community & campus programs to reinforce youthful brand identity.

Service 03

Separate new users, 3-month users, and long-term loyalists. Early detection of attitude dip helps Swiggy adjust communication, promotions, or UX to prevent churn.

Service 04

Context-aware recommendations, rewards for streaks, and “thanks for ordering with us” nudges enhance the user’s emotional connection and increase cognitive ease.

Perception:

**Interpreting Value,
Quality, & Safety on
Swiggy**

- **Case Evidence (What's Happening)**

- **Marketing Implications**

- **Recommended Solutions**

Swiggy's Tools to Shape Perception

- **Perceived Value is Multi-Faceted:** Value is assessed by the consumer as a function of Price, Delivery Reliability, and Review/Ratings.
- **Active Perception Management:** Swiggy actively uses its app features to influence this perception of fairness and value.

Tool 1

Ratings & Reviews:
Directly addresses quality
and choice risk.

Tool 2

Delivery ETAs (Estimated
Time of Arrival):
Addresses convenience
and reliability.

Tool 1

Loyalty Mechanisms
(Swiggy One, Fees,
Credits): Shapes
perception of price and
long-term value.

Marketing implications

High Friction = Cart Abandonment

Negative perception from opaque fees, hidden charges, or frequent cancellations damages trust and directly increases cart abandonment.

High Trust = Willingness to Pay

Positive perception from visible ETAs, high ratings, and clear membership perks (Swiggy One) raises the user's willingness to pay (WTP).

Recommended Solutions

Service 01

Improve Transparency
Show itemized fees (platform, tax, delivery) clearly *before* the final checkout page.
Eliminate surprises.

Service 02

Communicate Value & Quality
Surface verified reviews and order photos. Actively show savings, e.g., "You saved ₹X with Swiggy One" on the payment screen.

Service 03

Highlight Reliability
Boost trust by communicating reliability scores (e.g., "95% On-Time") next to the delivery ETA to manage expectations.

**Case
Evidence**

**Recommended
Solutions**

**Market
Implications**

**Decision
Making — How
Consumers
Choose What &
When to Order**

Case evidence

Service 01

Users rely on quick shortcuts like “Fastest,” “Top Rated,” and “Offers.”

Service 02

Default sorting and homepage layout heavily guide initial choices.

Service 03

Featured tiles and promotional banners drive visibility and clicks.

Service 04

Push notifications influence spontaneous ordering and timing.

Marketing implications

Service 01

Small UI tweaks (badges, CTA text, sort order) can shift user decisions.

Service 02

Choice architecture determines which restaurants or items get chosen more.

Service 03

Scarcity and urgency cues accelerate ordering decisions.

Service 04

Overloading users with options can create decision fatigue and lower conversions.

Recommended Solutions

Service 01

A/B test the default sort settings to find the highest-converting option.

Service 02

Add contextual nudges like “Popular with students” or “Trending near you.”

Service 03

Reduce promo clutter by limiting simultaneous banners and offers.

Service 04

Use real-time cues (ETA, stock levels, rush indicators) to guide faster decisions.

**Thank
You**
